

ECOSOFT REPLACEMENT FILTER BB20 CALCITE

Code: *CALBB20*

DESCRIPTION:

The filter contains a new mineral composition formulated to enrich water with essential dietary minerals, including calcium. The filter is used in systems for drinking water production after reverse osmosis filters. It replicates the natural conditions of water streams in the rock bed of mountain springs. This allows to obtain a consistent mineralization of 55...65* mg/L in purified water.

**20°C influent water temperature. Lower water temperature during the colder season may lead to lower product water mineral content, and warmer temperature may lead to higher mineral content. After one hour's or more standing time, the mineral concentration in the first glass of water may exceed the stated value.*

TECHNICAL AND OPERATIONAL CHARACTERISTICS

Parameter	Value
Standard size	4,5"x20"
Height, mm	508±2
Maximum outer diameter, mm	115
Maximum capacity, L	15 000
Recommended flow rate, l/min	2-4
Connection type	1/2"
Maximum service life, months	6

KEY FEATURES:

1. Drinking water enriched with calcium which is vitally important for human health
2. Especially recommended for teenagers and elderly people
3. Fresh, soft, and natural taste of water
4. Calcium reduces risk of osteoporosis, hypertension, stroke, obesity and many other diseases
